

Certificate in Controlling Health Risks Construction

Course Aim

This course has been designed to give site supervisors and site/construction managers an understanding and awareness of the health hazards which are encountered on a construction site, such as dusts, noise and gasses. It identifies the most common health risks associated with construction work, and how to control these risks to reduce workplace ill health.

Who Should Attend?

Please note:

There are no educational entry requirements, but students are strongly recommended to complete the online pre-reading module (Module 1) before attending Module 2 which is a one-day classroom-based course.

The enrolment key for the module is: Moodle99%

Course Duration

This is a 1 day course.

Certification

There is a text at the end of the one day taught course, and those who pass the course will receive the Certificate in Controlling Health Risks on Construction Sites.

Agenda

The course (Module 1 and 2) offers a comprehensive review of all key health hazards on construction sites, together with appropriate controls, and will cover:

- Health risks on construction sites
- Risk assessments
- Chemical hazards
- Physical hazards
- Ergonomic hazards
- Principles of control
- Personal Protective Equipment (PPE)

At the end of the taught course, delegates will:

- Understand the importance of controlling health risks on construction sites
- Understand the role that occupational hygiene plays in managing these risks
- Be able to identify health risks and their potential significance for common construction work processes
- Be able to identify chemical-based hazardous substances by using the information on labels and safety data sheets.
- Be able to identify appropriate control options for common constructions work processes
- Be able to identify where expert help is needed.
