

BOHS (P402) Surveying and Sampling Strategies for Asbestos in Buildings

Course Aim

The BOHS P402 course is designed to provide the theoretical knowledge and practical skills needed to survey buildings for asbestos.

The course is also intended to give you the knowledge and practical ability to make appropriate recommendations for managing asbestos and helping to minimise the risk of exposure.

Who Should Attend?

- Asbestos surveyors and managers of asbestos surveying teams
- Asbestos re-inspectors
- Asbestos report writers
- Architects
- Building surveyors

Entry Requirements

- An awareness of the content of HSG264 Asbestos: The Survey Guide (January 2010)
- Six month's previous experience assisting with asbestos surveys
- Previous training covering the relevant core competences outlined in Table A9.1 of HSG248 Asbestos: The Analysts' Guide (2nd edition, July 2021).

Agenda

- Understanding building construction and how asbestos is used
- Identifying and taking samples of different asbestos containing materials
- Understanding the different survey types and their requirements
- Carrying out material assessments
- Understanding and utilising all safety controls during surveys and sampling
- Providing accurate and comprehensive survey reports

Assessment

A practical assessment and two written exams

Certification

On successful completion of the required assessments, you'll achieve the BOHS P402: Surveying and Sampling Strategies for Asbestos in Buildings qualification.

Course Duration

This is a 3 day course
